S8 DSP FIRMWARE UPGRADE for macOS

WARNING: S8 DSP Firmware update procedure may be delicate. It is extremely important that it is performed under the best possible conditions. If the operation is started and prematurely interrupted (**e.g.:** PC locked up, accidental disconnection of the USB cable during update), our After Sales Service might need to be contacted to reprogram the S8 DSP.

1. To perform the FW update on your Mac, there is a specific macOS app, the "S8 DSP Update Tool 1.0.0 Build 3". The APP is available in the folder "FW upgrade for macOS", contained inside the .zip FW upgrade package: "Hertz_S8_DSP_FW_Upgrade_01.00.15.00.zip" available in S8 DSP's website page.

2. FW update procedure for macOS:

- 2.1. Turn OFF the S8 DSP (status led off)
- 2.2. It's preferable to disconnect the power supply cable from the S8 DSP.
- 2.3. Save the latest FW file in your Mac: "Hertz_S8_DSP_01_00_15_00.dsp".
- 2.4. Unzip the "S8 DSP Update Tool 1.0.0 Build 3.zip" APP in your macOS device.
- 2.5. Launch the "S8 DSP Update Tool" app in your Mac.
- 2.6. Select the desired language in the upper left corner menu. Then:
 - 2.6.1. Connect the S8 DSP to the Mac via USB.

- 2.6.2. Select the FW UPGRADE file: "Hertz_S8_DSP_01_00_15_00.dsp".

- 2.6.3. Select "UPDATE".

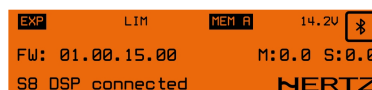

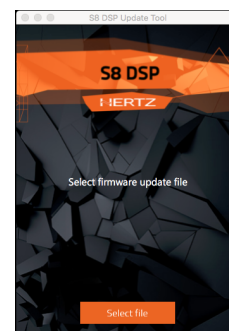

- 2.6.4. Confirm to start the UPGRADE.

- 2.6.5. The TOOL will shows a pop-up message once complete: "S8 DSP updated successfully".

- 2.7. Disconnect the USB.

3. Check the FW version in the S8 DSP

- 3.1. Connect the power supply cable (if disconnected before).
- 3.2. Launch the "S8 DSP" app in your Mac.
- 3.3. Turn on the S8 DSP device.
- 3.4. Connect via USB or BT and check the FW version (01.00.15.00).
- 3.4. The setup file stored into the device is kept in memory by the system. It's not erased during the FW upgrade.

All specifications subject to change without notice_22.A
